

Maltego Trace | Roadmap Highlights

ROLLED OUT

1. Access Trace with Maltego ID

Use the same Maltego ID to access Trace and the wider Maltego portfolio.

Move between products with a more consistent sign-in experience.

2. More Reliable Subject Matching

Reduce incorrect matches and unnecessary manual review with improved automatic confirmation during person searches.

Clear confidence levels and explanations help analysts understand each match before using confirmed information in further analysis.

Maltego Trace | Roadmap Highlights

UP NEXT

1. Additional RTB Ad-Tech Data

- Access an additional real-time bidding ad-tech source alongside existing SDK data to broaden device coverage across supported geographies.

Review combined results within existing Trace workflows, helping fill coverage gaps and provide a more complete basis for analysis.

Let us know which geographies are most relevant to your investigations.

Maltego Trace | Roadmap Highlights

UP NEXT

2. Additional European Ad-Tech Data

Access an additional SDK-based ad-tech source selected to broaden device coverage across supported European geographies.

Use the same Trace workflows to review additional results in areas where existing data coverage may be limited.

Let us know which European geographies are most relevant to your investigations.

3. Access Maltego Data Pass in Trace

Use selected Maltego Data Pass sources directly within Trace to add relevant context to your investigations.

Bring additional information into existing workflows to support analysis without moving between separate products.

Maltego Trace | Roadmap Highlights

LOOKING AHEAD

1. Wi-Fi-Based Positioning

- Use Wi-Fi positioning data to resolve or enrich location information within existing Trace workflows.

Gain an additional source of location context to support analysis where other positioning data may be limited.
